

METADATA

NAME: Krishi Jain
ROLL NO.: 16010422230
BATCH: B3

Introduction to Metadata

1

- Metadata: Essential data describing other data.
- Facilitates efficient organization and understanding of data.
- Enhances data accessibility and supports effective management.
- Enables streamlined retrieval and utilization, ensuring data quality and consistency.

2

- Descriptive Metadata: Defines data content, context, and characteristics.
- Structural Metadata: Specifies data organization and relationships.
- Administrative Metadata: Manages data ownership, access, and usage rights.
- Technical Metadata: Details data formats, sources, and processing methods
- Preservation Metadata: Focuses on ensuring long-term accessibility and usability of data.

Types of Metadata

3

Role of Metadata

- Enhances data discoverability through descriptive information.
- Supports data interpretation by providing context and structure.
- Facilitates data management by governing ownership and access rights.
- Enables interoperability between systems through standardization.
- Ensures standardized data formats for quality and consistency.
- Saves time through streamlined retrieval processes.

4

- Categorizes and organizes data efficiently.
- Describes data attributes for easy understanding.
- Maintains data integrity and consistency.
- Facilitates streamlined retrieval and utilization processes.
- Enhances data accessibility and discoverability.
- Improves data quality and consistency.
- Enables seamless integration across different systems.

KEY FUNCTION

5

SIGNIFICANCE

- Enables efficient data retrieval and management.
- Provides valuable context for informed decision-making.
- Promotes interoperability across systems.
- Enhances trust in data accuracy and reliability.
- Streamlines data organization for improved accessibility.
